

InsurTech '19

Cover's Insurtech's Conference Welcome

26 March 2019
Filipe Nunes

Munich RE 

Agenda

1. The world we live in today
2. Innovation
3. Tech Trend Radar

Disruption is happening...

Fortune 100 companies turned over 1977 - 2000
21% of companies turned over

Fortune 100 companies turned over 2005 - 2012
89% turned over in 7 years

Fastest and biggest turnover rate ever

Digital disruption is happening – insurance sector is lagging, but for how long ...

UBER

The biggest taxi company does not own a single taxi. (Uber)

The largest “MediaOwner“ who is not producing content itself. (Facebook)

AIRBNB

The biggest hotel company does not own property. (Airbnb)

The fastest growing lender. (SocietyOne)

The biggest Telecommunications comp. not owning infrastructure (Skype, WeChat)

The largest movie company has no cinema. (Netflix)

The most valued trade company not owning any stock. (Alibaba)

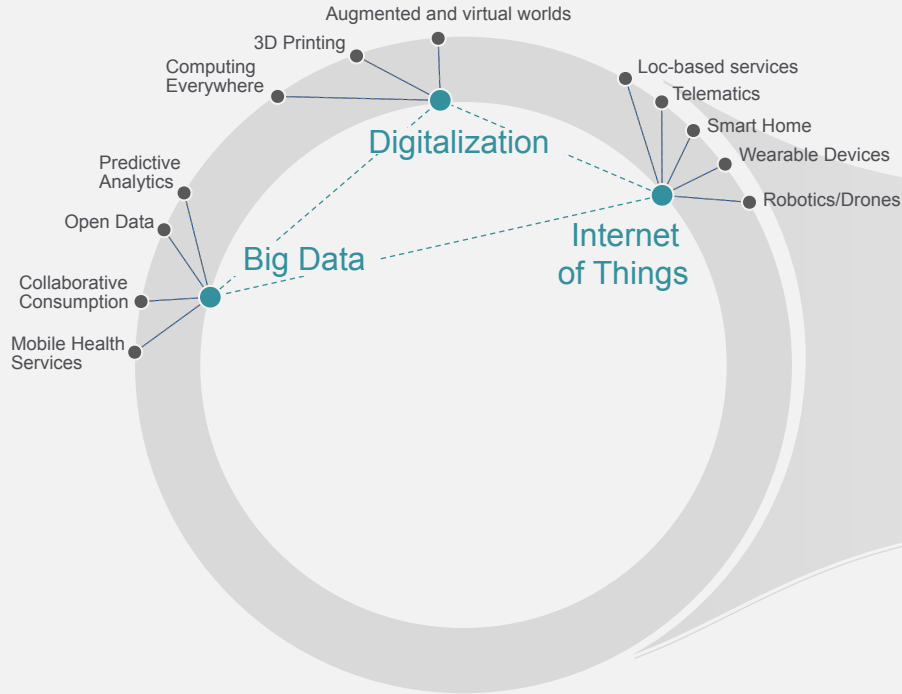

The largest software-distributor who does not write (most) apps. (Apple, Google)

The (data) world we live in today

External context of our operating environment

Core drivers of global trends

Relative assessment of the insurance industry today:

- Automated underwriting
- Digital application processes
- Predictive analytics
- Safety and security
- Insurtech rising...

- Largely paper-based
- Usually face to face sales
- Time-consuming
- Static products
- Limited use of data

The (data) world we live in today

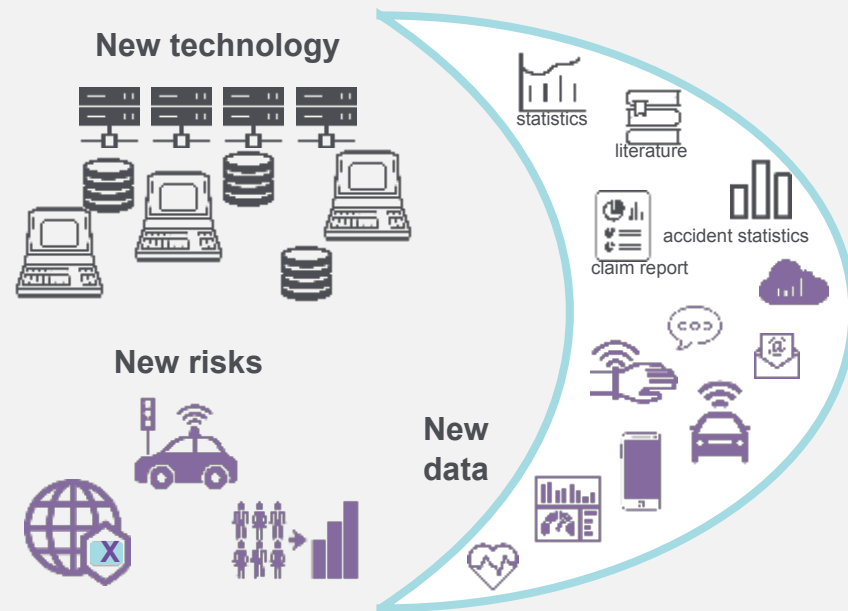

New technology and data leads to new risks and a need for change

We are used to analyse large amounts of data to identify trends, anticipate future events and price products.

Risk calculation in the past

Going forward we will be faced with new technology, new risks, new data and more effective tools to generate insights

Risk calculation in the future

Embracing our surroundings

Facts around our industry drives our current reality

Insurtech has been around in the life insurance industry for many years, albeit with different names. But insurers are yet to fully embrace the technology available today, for many reasons.

Fact #1:

We have not had a real need to embrace technology yet.

- We make steady profits from large in-force blocks. And will continue to do so for the foreseeable future.
- Hence there is limited need to prioritise changes to underwriting approach, risk selection philosophy, sales process and experience.

Fact #2:

We are lost in (a lack of) data.

- We collect lots of (non-digitised) rich data, but use very little of it. Instead we categorise applicants into standard and non-standard risks only.
- Past and external data give insights into lifestyle, are available, but doesn't get used.

Fact #3:

Propositions are mainly designed for the salesforce, not clients.

- Non-traditional distribution methods are a small proportion of sales globally.
- Processes designed for customers take priority after salesforce needs.
- Electronic applications are usually rolled out to intermediaries not clients.

Our customers

Tell us something else...

Global iPhone sales

Wearables global penetration rates

Number of facebook users

Source: Statista.com

65%

of consumers would like to use popular messaging services such as WhatsApp, Viber, Facebook Messenger, or iMessage to securely interact with organizations.

48%

of consumers have given up on an activity or request as information sharing was too difficult

44%

44% of consumers would be happy for their insurance provider to utilize third-party data from the likes of Facebook and collect data about their behavior if it meant they were provided with a more personalized service and lower premiums

2 Innovation

Innovation and digitalization affects all parts of the insurance value chain

Customer experience

Customer demand

- Digital natives
- Situational covers

Product design

- On-demand insurance
- Wearables
- Digital covers
- Smart mobile applications
- Flexible products

Under-writing

- Automated underwriting (e.g. by social media data)
- Predictive underwriting
- Capabilities to analyse big amounts of data

Sales

- Digitalization of sales organisation
- Digital player (e.g. We Chat)
- Start-ups
- Network provider (e.g. Telekom)

Claims management

- Automated payout systems
- Fraud detection by AI
- Automated plausibility checks

Asset management

- Investment options customized to specific clients' needs
- Investment into alternative asset classes

Automatization of corporate processes & cost savings

Selected start-ups are going to take over parts of the value chain in insurance

How to tackle innovation?

Most Innovative (Re)insurance Company

*Munich Re, Lemonade, AXA and
Swiss Re viewed as most innovative*

- Munich Re Digital Partners

Global innovation hubs for customer proximity and wide range of innovation

Our innovation process

Example: innovation in action

Remote Sensing – Algorithm-based, automated claims processing after natural catastrophes

Day of the event

Hurricane event

Hurricane makes landfall and causes wide spread damage to insured property in US

starting 3 days after event

Aerial Imagery
by NICB GIC

Aircraft deployed capture high-res imagery of impacted areas

4–6 days after event

Computer Vision
by Munich Re

AI algorithms locate all property and assess the insured damages

5–10 days after event

Claims Solutions
tailored to/by each insurer

Hurricane claims management solutions

Bottom-up validated loss estimates

Triage/coordination of various adjusters

Semi-automatic roof damage pay-out (in 2019)

“Remote Sensing” allows better claims triage and faster pay-out resulting in increased customer satisfaction

Higher efficiency – lowers cost per claim

More cat claims inspections per loss adjuster per day

... resulting in lower cost per claim

Experienced adjusters handling more relevant work

Use human labor where relevant, apply machine where beneficial

Actively approach policyholders before FNOL

Faster pay-out increases customer satisfaction

Pay-out 1st instalments with much higher accuracy

Repairs start sooner and claims inflation mitigated

Technology predictions for 2019 and beyond
